— WHAT YOU NEED TO KNOW ABOUT THE CARBON TAX —

Question 1. What percentage of the atmosphere do you think is CO2?

Answer: CO2 is less than 0.04% of the Atmosphere.

Question 2. What percentage of the CO2 is man-made?

Answer: Nature produces nearly all of it. Humans produce only 3%.

Question 3. What percentage of the man-made CO2 does Australia produce?

Answer: Australia produces 2% of that 3%, which is 0.06% of the CO2 going into the atmosphere from all sources.

Question 4. Is CO2 a pollutant?

Answer: We have not been told the whole truth. CO2, whether emitted from a volcano or big industry, is a clean, clear, trace gas. It is necessary for life to exist on earth and 100% beneficial.

Question 5. So how much warming will CO2 produce?

Answer: The best estimate from experienced, unbiased scientists is that doubling the pre-industrial level of 280 ppm to 560 ppm will warm the atmosphere by half a degree C. This will take about 150 years.

The Government's view is CO2 is polluting our atmosphere, contributing to the hole in the ozone layer and contributing to global warming. That Australia is one of the highest contributors (per capita) of man made CO2 and that we need to reduce our CO2 output. Prof. Tim Flannery (Govt. Climate Change specialist) said "if we cut CO2 emissions today, it would 1,000 years for an effect on temperature". The Government proposes to slap a CO2 tax on Australia's biggest emitters of CO2.

What will this mean for the average Australian? The cost of this tax will filter down so that every Australian will pay more for every goods and services bought.

The Government intends to compensate only some Australians for this increase in the cost of living. The Government will take from one section of the community and give to another and in the process create a whole new bureaucratic department to administer this tax.

Will this carbon tax reduce global warming?.....NO!.....as stated by Prof. Tim Flannery, it would 1,000 years for an effect on temperature. So why do we need this carbon tax?????

WE DO NOT NEED THIS TAX.....WE DO NOT WANT THIS TAX.....DO YOU?
